Re: Providence Point Retirement Community

Dear Steve:

I am writing this letter to commend Westmoreland Electric, Inc. for a job well done at Providence Point Retirement Community in Pittsburgh, PA. With 222 independent apartments, 63 skilled nursing units, 60 assisted living units, 20 dementia units, a large community center and electrical, telecom and lighting site work for the entire campus (including 35 detached patio homes) the electrical construction for this project was an impressive undertaking.

Whether I was working with the project managers in the construction trailer, electricians out in the field or staff in the main office, everyone at Westmoreland was always professional, friendly and polite. I know the entire construction team appreciated Westmoreland's efforts in getting issues resolved while maintaining an aggressive construction schedule. I also know that Westmoreland was accommodating in dealing with changes from the Design Team and Owner requests to assist with the occupancy and operational procedures for the facility.

The project looks wonderful and the Owner, staff and residents of Providence Point have a community for which they should feel very proud. Having seen the project progress from the ground up and the workmanship that went into the construction of the electrical systems, I know that Westmoreland Electric, Inc. should feel proud as well.

If I can be of any further assistance, please let me know.

Sincerely,

REESE ENGINEERING, INC.
